The Global Use of Medicines 2024: Outlook to 2028. Report by the IQVIA Institute for Human Data Science.

# Growth outlook unchanged at 5-8% CAGR to 2029, driven by immunology, oncology, diabetes and obesity

## 1 Rising #s of NAS but access varies ▶

Global NAS in the last five years totaled 394 up from 254 five years earlier, but China-only NAS, and U.S. launches delayed in reaching other markets. Lower-income countries get fewer than half of novel drugs

## 2 Slowing volume outlook ▶

Patient use of medicines grew by 14% over the past five years but is expected to slow to 4% through 2029. Per capita use of medicines is higher in higher income countries

## 3 Therapy area historic volume ▶

Immunology, endocrinology, and oncology, have exceeded the global 15% average growth in medicine use in the past five years, driven primarily by substantial numbers of novel products and wider access.

## 4 Spending and Growth Drivers ▶

Growth in developed economies is accelerating driven by new products and wider use of existing branded medicines offset by patent expiries.

## 5 Therapy area Outlook ▶

Major advances are expected to continue, especially in oncology, immunology, diabetes and obesity. Notable small molecule innovations are also expected in these diseases as well as neurology.
